

automatic article segmentation

Cut articles automatically with expaper autocut

More flexibility

Analysis of epaper PDFs in seconds: keyword-based

100% quality supply

Integrated control and correction workflow, worldwide available

Export in original layout

...in any output format, as clipping or cutout

Using **expaper**, you search epaper PDFs for relevant articles and clip them electronically. The finished clipping is used in press reviews and archives.

expaper autocut automates the process of article cutting and is therefore of interest for media monitoring organisations and publishers: The complete epaper is cut into single articles in just a few minutes and is exported as article PDFs with all relevant metadata. The integrated control and correction workflow ensures optimum quality.

expaper autocut enables and optimizes digital processing and thus extends the digital value-added process.

Features

Workflow

epaper PDFs are a widely used output format for newspapers and magazines, but do not provide individual articles. However, individual articles are indispensable for media observers and publishers as basis for research and archives.

expaper autocut automatically cuts epaper into individual articles and thus creates significant added value in a variety of application areas.

As media observer, you supply individual articles in their original format and all associated metadata as well as the full-text, either as excerpts or as clippings.

As publisher, you supply marketing portals, archives and websites with extracted articles in a wide variety of output formats, thereby generating additional revenue.

Use advanced segmentation techniques also for scanned newspapers and integrate OCR and keyword matching into the process.

To ensure highest quality standards, use the control and correction workflow. It makes recognition results transparent and optimizes them with just a few clicks.

Outsource this work decentrally to your global partners to make the most of the potential available worldwide.

Working with expaper

Import articles in seconds, search and clip in just one step, export in original layout. Optimally coordinated processes, functionalities as well as versatile application possibilities are the features that make **expaper** a must-have for press review work.
